

S|CASE

Adding and Annotating Functional Requirements

Themistoklis Diamantopoulos
AUTH

Overview

- S-CASE Workflow
- Inserting functional requirements
- Requirements View
- Annotations View
- Automatic Annotation
- Importing/Exporting requirements

S-CASE workflow

Mainly identify RESTful CRUD resources, their properties and connections

UML diagrams:

- edited & images
- static & dynamic

storyboards

analysis class diagrams

textual requirements

Models & Processes
NLP/Vision/Software Engineering

S-CASE Ontology

workflow editor

retrieve resources

Web Service Synthesis & Composition

retrieve appropriate 3rd party WS

deploy composite WS

Web Service Semantic Annotation & Matchmaking

domain ontologies

annotate

Inserting functional requirements

- Create new requirements
 - Select the project and press
Create requirements

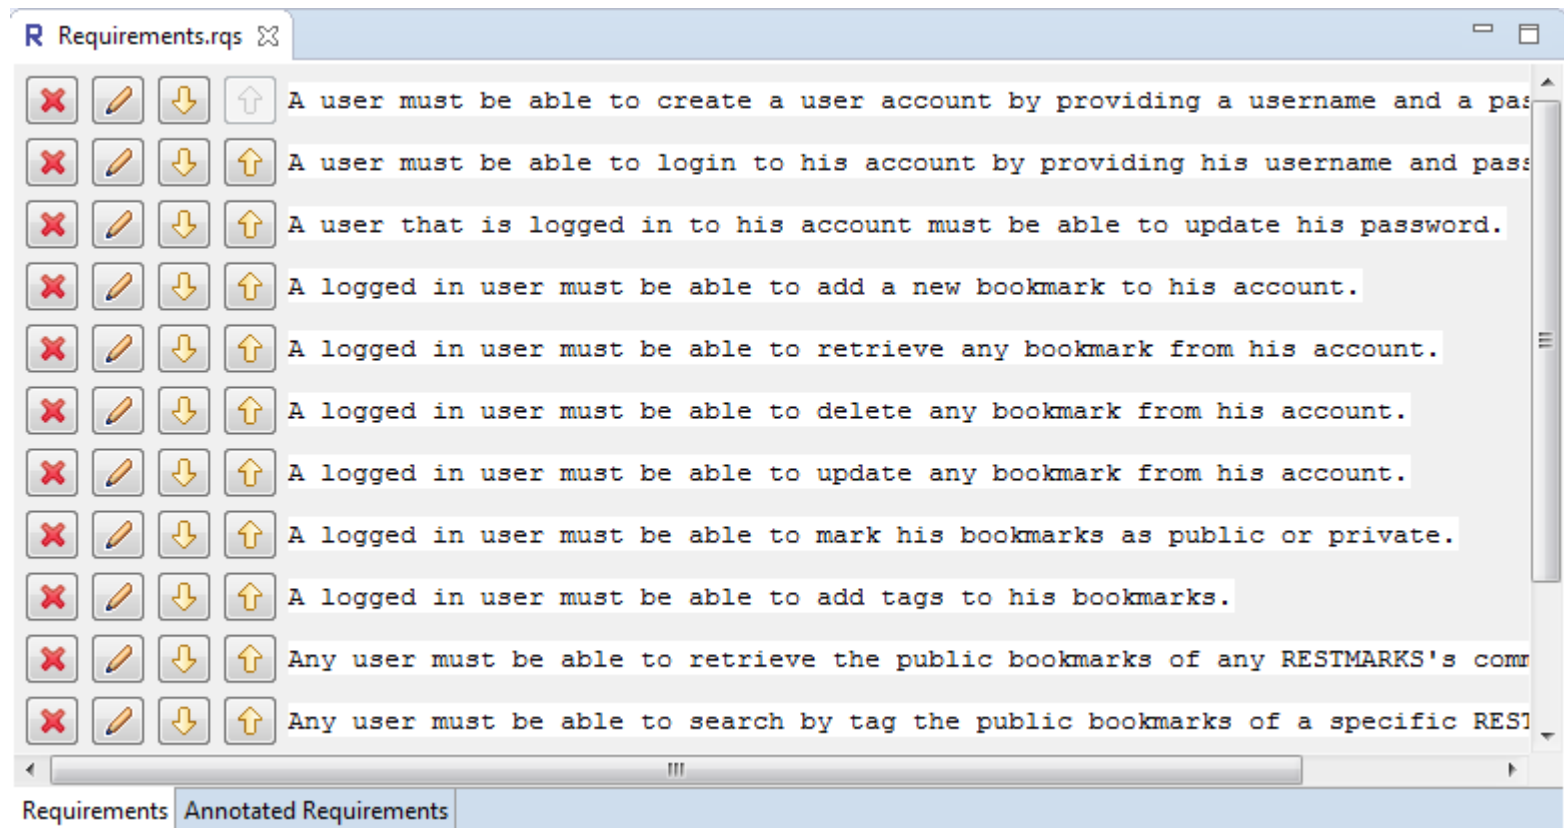

Requirements View (1/2)

- Requirements View Actions

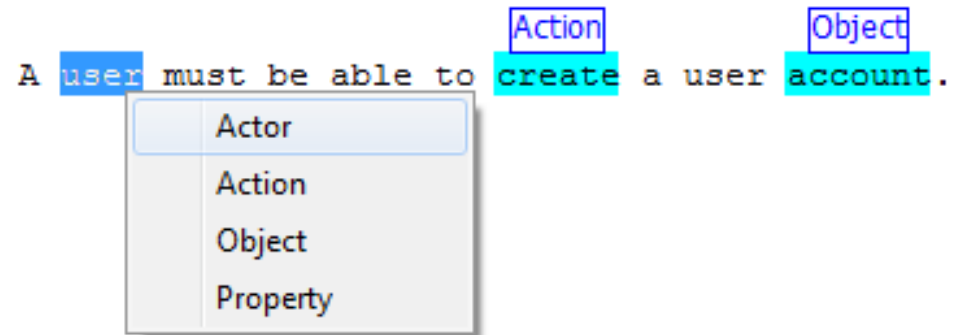

Requirements View (2/2)

- Example

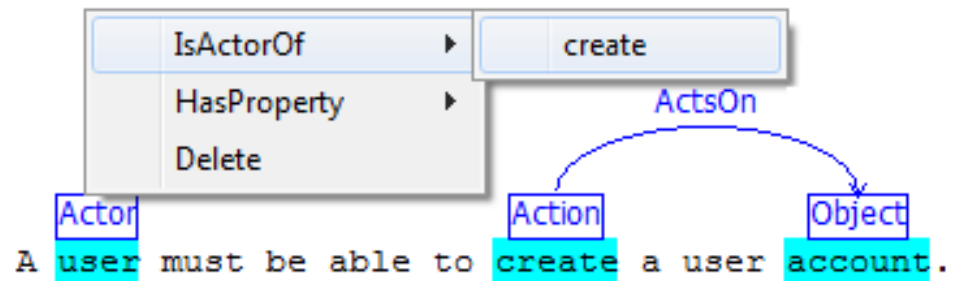

Annotations View (1/3)

- Annotate entities
 - Select word and right click on it
 - Annotate word as one of:
 - Actor
 - Action
 - Object
 - Property

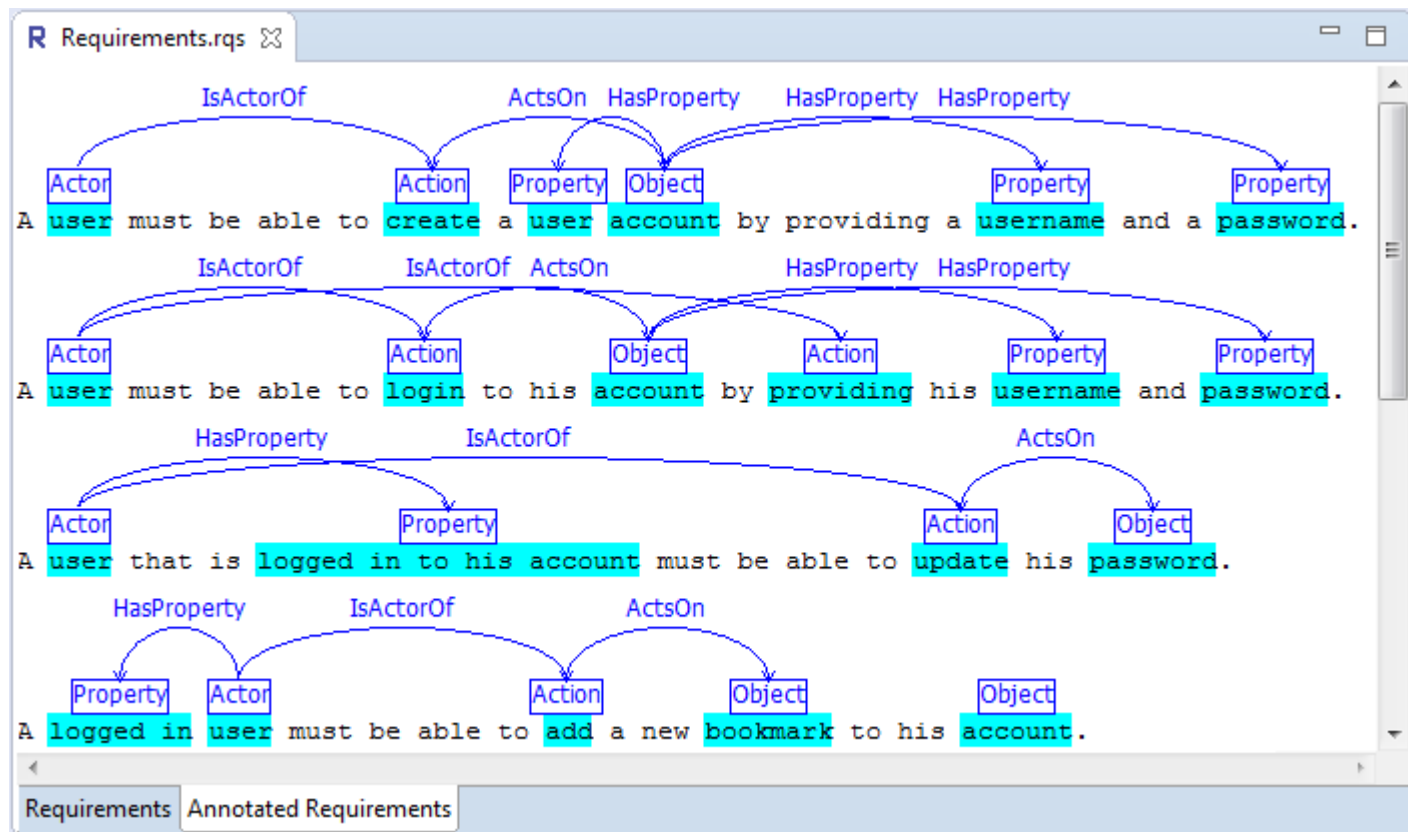

Annotations View (2/3)

- Annotate relations
 - Right click on an entity annotation
 - Select the relation and the destination object, where possible relations are:
 - IsActorOf
 - ActsOn
 - HasProperty
 - RelatesTo

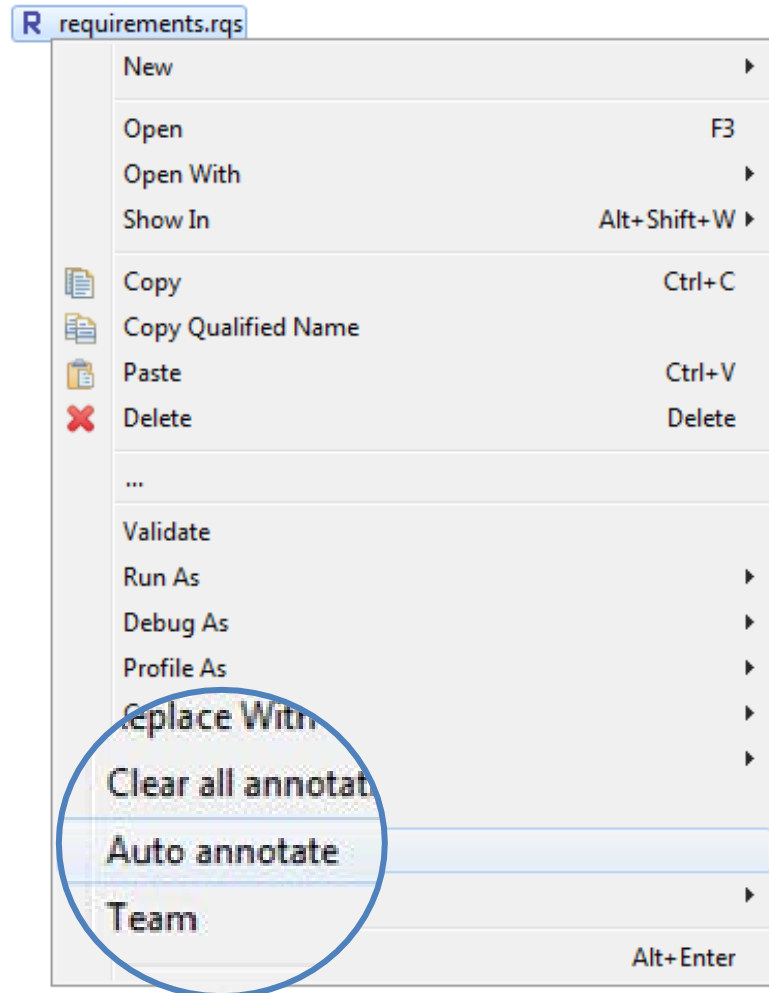

Annotations View (3/3)

- Example

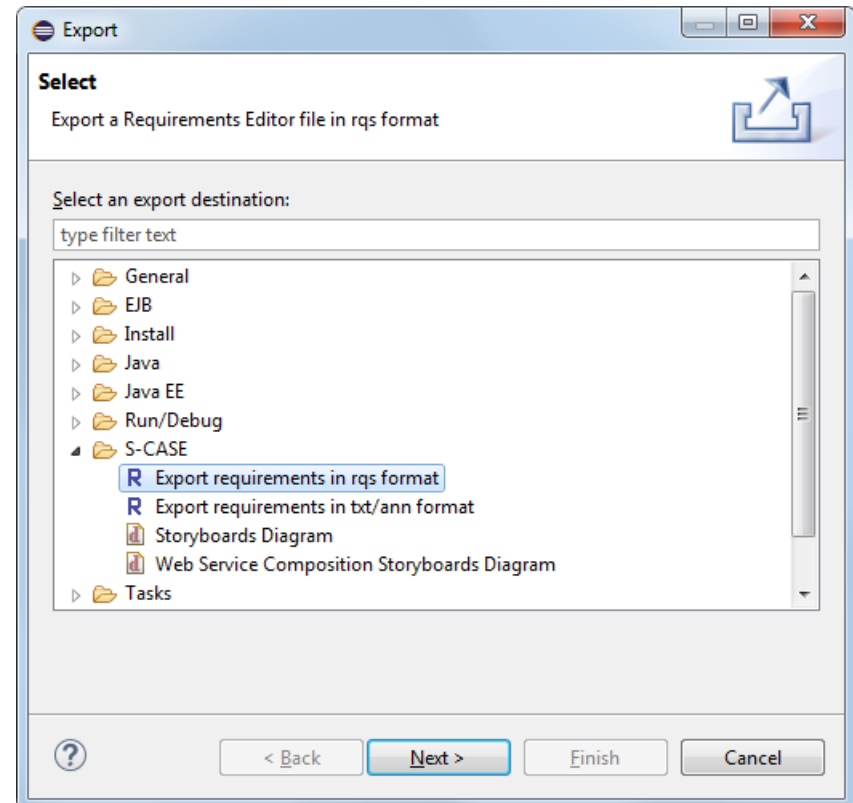

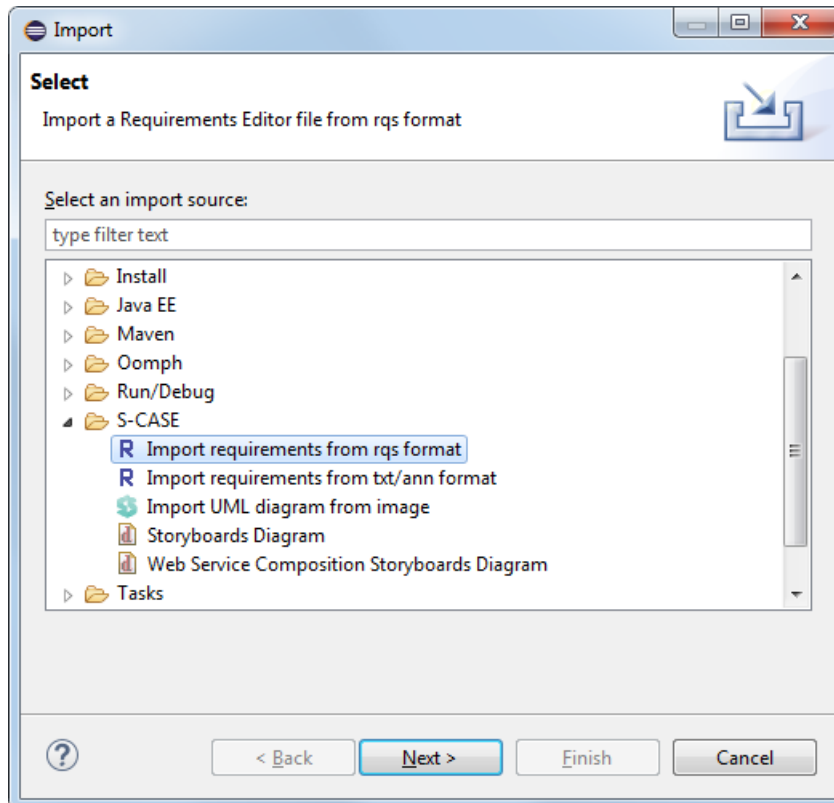

Automatic Annotation

- Right click on requirements file and select “Auto annotate”

Importing/Exporting requirements

- Import and Export Wizards

Thank you!
